

Skeeter
STEMCO MARINE MANUFACTURED UNDER U. S. PATENT NO. 150176

**ACTION-PACKED FIBERGLASS BOATS
FOR EVERY SPORTSMAN**

STEMCO MARINE / LONGVIEW, TEXAS

Load your tackle or guns in the protected areas beneath the gunwales and bow . . . slip your all-day tank in the stern just behind the rear-seat . . . fire that motor and you'll be thrilled as your sleek-lined **Skeeter** gets-up and planes smoothly, taking you to your

favorite fishing spot. You'll be amazed at how easily it glides and handles when stern paddled . . . how easily it maneuvers when bow sculled . . . gliding you quietly and gently near the hiding place of the big ones. When fishin's done, you'll scurry home in a hurry.

SAFE . . . STRONG SPEEDY . . .

Especially designed for the fisherman and the hunter — these highly maneuverable **Skeeter Boats** combine the durability of maintenance-free, gleaming fiberglass with a patented, functional design—proven in years of use.

Now available — 13' 6½" **Skeeter** in Pacific Turquoise and the new 15 foot **Super Skeeter** in Sportsman's Tan.

See them both today at leading Boat Dealers. Take nothing less than the best . . . **Skeeters** are in a class all by themselves!

The **Skeeter's** low silhouette, with safety-flared deck and sides puts you within easy pick-up of your catch or decoys. The **Skeeter** comfortably seats two fishermen and the **Super Skeeter** seats three or four. The center seat in the **Super Skeeter** is removable.

The **Skeeter** maneuvers easily with all types of small outboard motors and can easily handle large motors up to and including the 25 hp. class . . . up to 35 hp. on the **Super Skeeter**.

Trailing is no problem with a **Skeeter**. It loads and unloads easily on and off a standard rig.

Fire retardant interior base coating of polyester plastic is just one of the built-in safety factors . . . adds years of safe boating with your **Skeeter**.

Torture-tested hull has bottom of fine quality Ecuadoran balsa wood, solidly encased in fiberglass. This construction, usually found in only the most expensive runabouts, is an extra dividend of rigidity, stability and flotation.

Seats are an engineered combination of plywood and fiberglass.

Designed especially for years of rugged use, they also provide additional safety flotation. Height of seats assures day long fishing and hunting comfort. Boat chairs may be attached without bothersome modification.

Transom is constructed of plywood and fiberglass, laminated to withstand motor stresses.

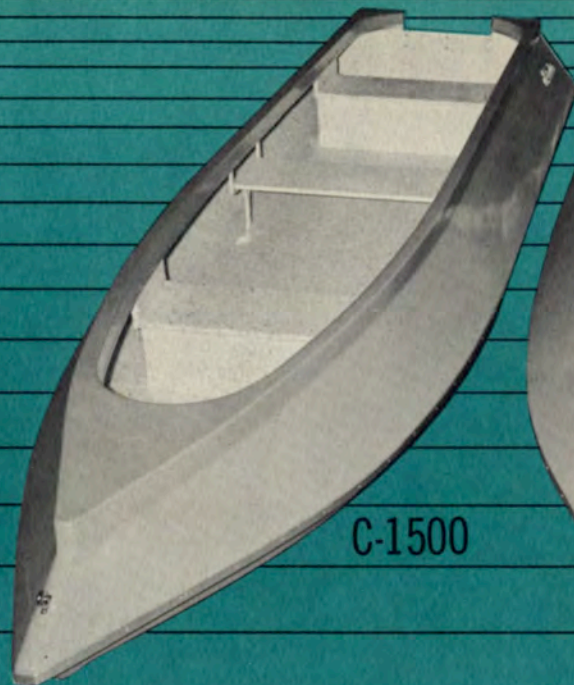

DESIGNED ESPECIALLY FOR FISHERMEN AND HUNTERS...

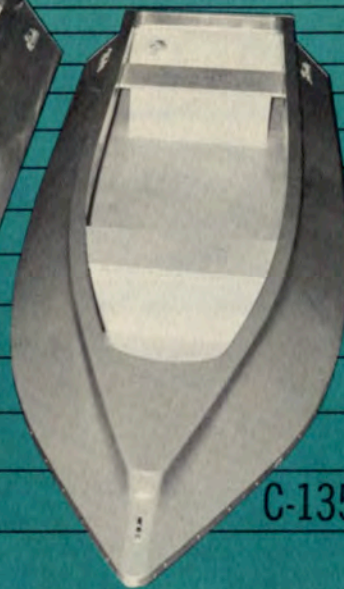

Skeeter
SUPER Skeeter
FIBERGLASS BOATS

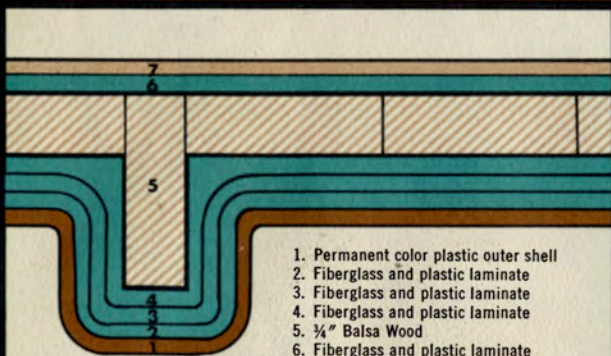

Standard Equipment
 Built-in color
 Heavy duty bow eye
 and transom handles
